Enterprise Data Management and 360 Degree Reporting for Asset Managers

Overview

ER360 is a powerful combination of Kuberre's Enterprise Data Management Software, a robust BI Platform powered by Information Builders' WebFocus, and an Enterprise-grade big data platform from Cloudera. It is designed to address the asset manager's end-to-end reporting needs. The joint solution is a cloud-hosted, prebuilt, turnkey EDM plus a reporting solution that provides prebuilt analytics for investment, risk, portfolio managers, and client reporting.   ER360 will integrate many different data repositories that capital market clients have now, such as dozens of excel databases, different core systems, homegrown repositories, and market data feed repositories. The solution automatically integrates this data for a single view of investments using a cloud solution based on Cloudera's platform.
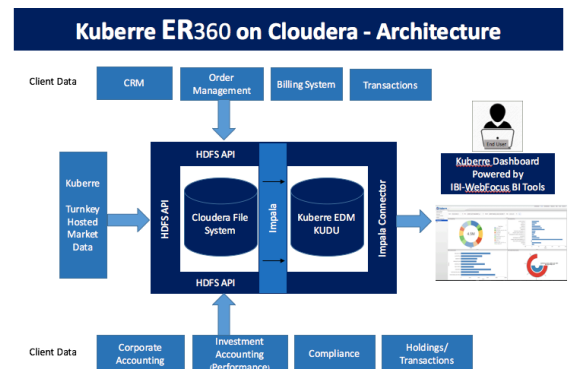

Business Value

ER360 gives organizations a single version of the truth and a much clearer picture of a client' activity, investment positions, and opportunities.
With financial instruments growing in complexity and the increasing number of data sources, it is harder to assess the risk for a single portfolio or across portfolios. ER360 offers an easy way to visualize risk and portfolio performance, run what-if scenarios and obtain reports that are C-suite ready.

Implementation

A prebuilt data management solution greatly accelerates implementation time. ER360 is a cloud based hosted solution built on Cloudera's Enterprise Data Hub for the cloud, that can be 100% managed and supported by Kuberre. As a first step, we can deliver a cloud-based POC, including loading up to 8 data feeds, in approximately 4 weeks, from loading data to delivering prebuilt reporting dashboards. ER360 is enhanced and maintained as a software solution with updates and enhancements automatically included as part of maintenance.

Architecture

About Kuberre

Kuberre provides Enterprise Data Management software and solutions to capital markets. Some of the most reputable asset managers, big and small, leverage Kuberre's software and domain expertise to solve some of their most complex data management problems.

About Information Builders

Information Builders provides the industry's most scalable software solutions for data management and analytics. We help organizations operationalize and monetize their data through insights that drive action. Our integrated platform for business intelligence (BI), analytics, data integration, and data quality, combined with our proven expertise, delivers value faster, with less risk.

About Cloudera

Cloudera delivers the modern platform for machine learning and advanced analytics, optimized for the cloud. The world's leading organizations trust Cloudera to help solve their most challenging business problems by efficiently capturing, storing and analyzing vast amounts of data.
